

## What is Engage?

ENGAGE your patients with the most rewarding, secure, meaningful, and liberating experience. An app where patients can access medical records, attend and schedule telehealth appointments, communicate with care team members, earn rewards for engagement, learn relevant, personalized medical information in the form of rich videos or articles, as well as be reminded of upcoming appointments and reminders to take prescriptions. Engage is fully interoperable with Bridge.

## Key Differentiators

- ✓ Incentive mechanisms that drive behavioral modifications leading to better patient satisfaction and health outcomes.
- ✓ Available on both iOS and Android devices
- ✓ Customizable and re-branded to suit your organization
- ✓ Content-rich experience to empower Quintuple AIM - better care, lower costs, improved health, sustainable care management and equitable access to care
- ✓ An eco-system where all constituents wins – Patients, Providers, Administrators, Care managers and Partners.

## The ENGAGE experience

**My Bounty** - 'My Bounty' is where users can track and redeem tokens for completing tasks. They can view different tasks and the number of tokens for each task. The tasks, token structure, and incentives are entirely customizable based on your organization's needs.

**My Health** - Patients are able to keep track and update health records, including ALL their information aggregated in one view, as a digital health wallet such as vaccination records, medication records, family history, files such as lab results, and insurance cards, and much more.

**My Library** - 'My Library' allows patients to watch videos and read personalized articles on medical content.

**My Reminders** - 'My Reminders' is where patients can stay on top of their care. They can create private, self-appointment and medication reminders, as well as reminders for other care events such as Blood Pressure measurements.

**Manage My Care** - 'Manage My Care' is an all-inclusive experience for patients to connect with their care team members. The patient can view their care team and upcoming appointments, including in-person and telehealth, as well as complete their telehealth engagement from here. Patients also have the ability to request an appointment.

**My Messages** - Patients can connect with their care team via secure, HIPAA compliant text messaging while in this app. Your organization has the ability to choose which care team or staff members will be the ones communicating with the patient.

**Are u ready to engage?**
